Beautiful furniture. Made to feel at home.

WILL IT FIT?

Measure with confidence before you order.
Your guide to furniture sizes, access and a smooth delivery.

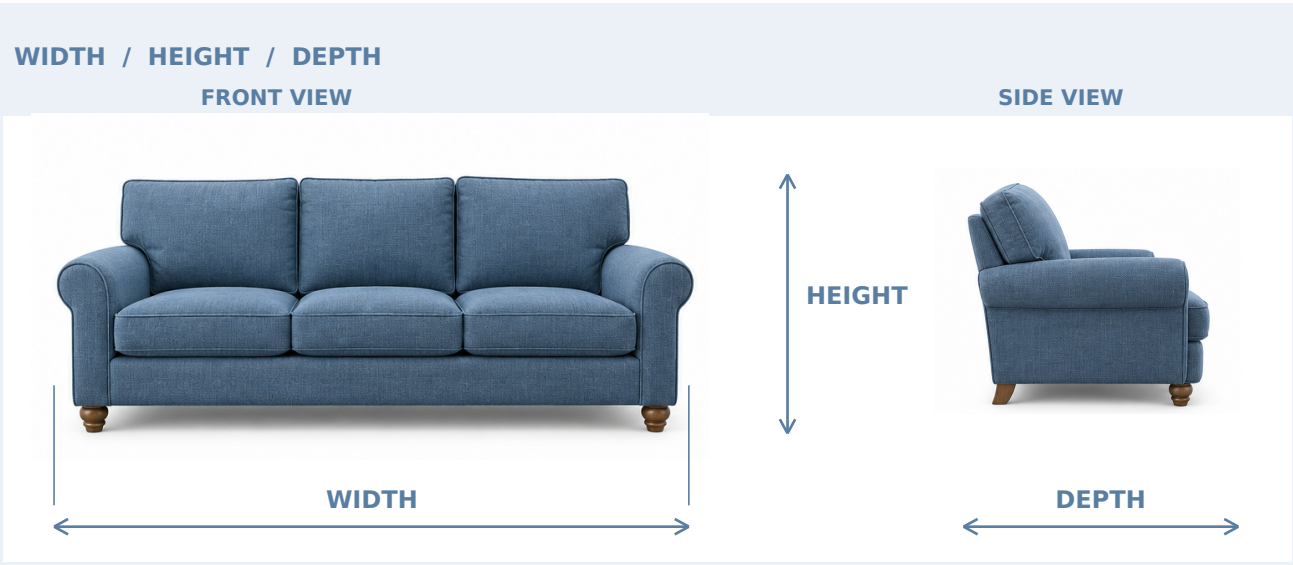

A little measuring. A smoother arrival.

01 YOUR FURNITURE
02 YOUR ACCESS
03 YOUR CHECKLIST

01 / KNOW YOUR FURNITURE

How to measure your sofa

Measure the widest, tallest and deepest points, including arms, cushions and feet. Use the overall dimensions of your exact model.

A Confirm what arrives

Ask us for the size of the largest delivery section or package. Product dimensions usually describe the finished item; packaging can add to its size.

B Plan the room

Use suitable low-tack tape to mark the footprint. Leave room to walk around it, use nearby furniture and open doors or drawers.

C Moving furniture

Recliners and sofa beds need space in their extended position. Check rear clearance and access to a power socket if required.

D Assembly space

Beds, ottomans and wardrobes may need extra room during assembly. Check ceiling height and space to operate storage.

01 / SPECIAL SOFA SHAPES

Every shape needs a check

Corner sofas, recliners and sofa beds need more than a single footprint. Measure the space they use as well as each delivery section.

CORNER SOFA / TOP VIEW

RECLINER / SIDE VIEW

A Corner & modular sofas

Record both overall lengths and the depth of each side. Confirm left-hand or right-hand orientation using the supplier diagram. Ask for the largest individual delivery section.

B Recliners & sofa beds

Check the fully extended dimensions and any required wall clearance. For a sofa bed, allow room for the open bed and space to get in and out.

MAKE A FULL-SIZE OUTLINE

Mark the complete shape on your floor with suitable low-tack tape. Open nearby doors and try walking around the outline. Include the extended recliner or open sofa bed in your check.

Diagrams are illustrative and are not to scale. Dimensions and mechanisms vary by model.

02 / TRACE THE DELIVERY ROUTE

From the van to your room

Measure every restriction along the route. The tightest opening and the space around turns are what matter.

Clear opening

Turning space

Stair clearance

A Doors & hallways

Measure the clear gap with doors open. Include handles, radiators and fixtures. Check the space before and after each opening; fitting through a door does not guarantee a turn.

B Stairs & landings

Measure the narrowest stair width, usable landing space and lowest headroom. Handrails, sloping ceilings and bulkheads may restrict lifting or tilting.

C Lifts & shared access

Check the lift doorway, cabin dimensions and weight limit. Include communal doors and corridors, and confirm any building delivery restrictions.

D Outside your home

Check gates, paths, porches and steps. Tell us about parking restrictions, long carries or uneven access before your delivery is arranged.

IF ACCESS IS CLOSE, SPEAK TO US FIRST

Send clear photographs and measurements. Shape, packaging, handling space and turning angles all affect access; dimensions alone cannot guarantee a fit.

03 / MEASURE, CHECK & PREPARE

Ready for its new home

Complete this record before ordering and keep it handy when discussing your delivery with us.

YOUR MEASUREMENTS	USE CM
Product / range	
Finished size: width / height / depth	
Largest delivery piece or package: W / H / D	
Entrance opening: width / height	
Smallest internal door: width / height	
Hallway width / turning space	
Stair width / lowest headroom	
Landing width / depth / height	
Lift doorway / cabin size / weight limit	

- ☐ Confirm whether any feet, backs or sections can be removed.
- ☐ Confirm the delivery and assembly service for your order.
- ☐ Clear the route and make space in the room of choice.
- ☐ Keep children and pets safely away during delivery.
